Information

Stainless Steel-Plates with tapped holes GN 7247.4 are designed with appropriate dimensions to be used as accessories for the fastening flanges of multiple-joint hinges GN 7241, GN 7243 and GN 7247.

The Stainless Steel-Plates are fastened from the outside via through-holes in the housing wall or alternatively by welding to the inside of the wall. This results in effective protection against vandalism, and the outside of the housing remain free of attachments that do not match the design or that should be avoided entirely in the interests of easy cleaning.

They make threaded holes, nuts and washers unnecessary during installation. This eliminates the labor-intensive pre-installation of such parts as well as the need to hold them in place during tightening or loosening. The plate thickness *s* corresponds to the minimum screw-in depth of thread *d*₁, which should be fully achieved.

The holes *d*₂ receive tensioning or positioning pins, if necessary, making it easy to position the plates and the multiple-joint hinges.
