

## Standard Parts for profile systems

Ganter's product range includes many standard parts for the construction of profile systems. These include, for example, cabinet „U“ handles, hinges, tube clamp connectors, mounting clamps, indexing plungers and T-nuts for profile systems.

Angle pieces GN 960 and GN 961, especially developed by Ganter, fill out this product offering.

### Product family standard parts for profile systems

All standard parts in this product family are indicated by this special icon, which makes navigation easier and shows at a glance that this is a Ganter standard with profile system compatibility.

Driven by dedication to consistent service, Ganter now also offers matching assembly sets - in the tried and tested style of Ganter's own standard. The new assembly set standards (GN 965 and GN 968) each consist of T-Nuts for the T-Slots of the profile system and screws.

### Assembly sets GN 965

For profile systems of the current grid dimensions 30 and 40 mm with slot widths 6 and 8 mm, **GN 965** (→ Page 1428) offers the required screw head types and lengths - for all possible fastening situations. The T-nuts, also separately available as **GN 506** (→ Page 872), can be used in any location by swiveling them into the slot. A guide step and a spring element (ball/thrust spring) simplify the installation.

### Assembly sets GN 968

If installing to a profile with grid dimensions 30, 40 or 45 mm with slot widths 8 and 10 mm, then **GN 968** (→ Page 1438) offers all the required fastening parts. The supplied T-nuts **GN 505** (→ Page 878) can also be used at any location by turning them into the profile slot.
