Information

Cabinet U-handles GN 435.3, tall design, are made from bent round profiles and are fastened by welding. They are designed for applications requiring more height for gripping. For example, this makes it possible to grab or hold the handle while wearing safety gloves. Some dimensions also satisfy the crane access standard DIN EN 13856.

In addition to serving as a handle, it can also be used as a hose guide, retaining bracket or the like.

The holes d_2 serve, if necessary, for inserting dowel pins or guide pins that provide a simple method for positioning and fixing the cabinet U-handle in place via the alignment holes in the opposing part for the welding process.
