**Information**

Edge handles GN 481 are particularly compact and are used, for example, on the side of monitor housings as a handling aid or generally to protect the edges of housings.

Tolerance compensation of 1 mm per end piece simplifies installation. The two end pieces are mounted to the handle profile with self-tapping countersunk screws so they can be screwed back on after adjusting the length of the handle without requiring readjustment. This allows the length of the housing to be adapted to any desired size.
