## Specification

## - GN 918.1

Steel

- Clamping bolt and thrust washer Case-hardened
- Threaded bolt nitrided

Property class 8.8

- Lever

Blackened

- GN 918.6

Stainless steel

- Clamping bolt AISI 303, chemically nickel plated
- Threaded bolt and thrust washer AISI 630, tempered
- Lever AISI 303, matte shot-blasted
- Ball knob DIN 319 Plastic, Duroplast Black, shiny finish
- Strength Values of Screws $\rightarrow$ Page 2152
- Plastic Characteristics $\rightarrow$ Page 2158
- Stainless Steel Characteristics $\rightarrow$ Page 2166
- RoHS

## Information

Clamping bolts GN 918.1 / GN 918.6 have a circumferential wedge surface. They allow for rapid and secure clamping and releasing with a relatively large clamping range and with high clamping force. Owing to the small pitch angle (wedge angle), the clamping bolt is self-locking.

The ball levers of types KV and GV form a positive connection with the clamping bolt by means of a serration. During assembly, the lever can thus be fixed in a position favorable for clamping or, in the relaxed position, rotated out of the clamping range.

Use of the thrust washer eliminates the need for special requirements on the design of the threaded hole, which allows, for example, mounting to tables with T-slots.
